

Tutorial Mendownload Webserver

Assalamualaikum setelah mendownload texteditor langkah selanjutnya untuk membuat website adalah mendownload webserver, gunanya agar web yg sedang kita buat/kembangkan bisa di uji di server komputer masing-masing / localhost / localhost

caranya mudah kali ini saya akan memberikan tutorial untuk mendownload xampp, Kalian hanya perlu membuka link ini <https://www.apachefriends.org/download.html> ,

Tampilan webnya seperti ini

The screenshot shows the Apache Friends website's download page. The header includes navigation links: Apache Friends, Download, Add-ons, Hosting, Community, and About. A search bar is also present. The main heading is "Download". Below it, a text block states: "XAMPP is an easy to install Apache distribution containing MariaDB, PHP, and Perl. Just download and start the installer. It's that easy."

The central part of the page features a table for XAMPP for Windows versions 7.2.33, 7.3.21, and 7.4.9. The table has columns for Version, Checksum, and Size. Each version row includes links for "md5" and "sha1" checksums, a "Download (64 bit)" button, and the file size.

Version	Checksum	Size
7.2.33 / PHP 7.2.33	What's Included? md5 sha1	154 Mb
7.3.21 / PHP 7.3.21	What's Included? md5 sha1	155 Mb
7.4.9 / PHP 7.4.9	What's Included? md5 sha1	156 Mb

Below the table are links for "Requirements", "Add-ons", and "More Downloads". To the right, there is a "Documentation/FAQs" section with a brief introduction and a list of links: Linux FAQs, Windows FAQs, OS X FAQs, and OS X XAMPP-VM FAQs. An "Add-ons" section is also visible at the bottom right.

kalian tinggal download saja sesuai spesifikasi perangkat komputer/laptop kalian masing-masing, saya sarankan untuk mendownload versi xampp terbaru yaitu 7.4.9 yang sudah mendukung versi php 3+
